

A more considered Kanak

Final website concept · dark theme · 6 October 2026

A specialist services company built on pre-agreed, measurable outcomes, shown through three stages: ideation, solution design and productionizing. Your existing logo is retained.

Concept	Logo & type	Wireframes	Site review
---------	-------------	------------	-------------

Intelligent systems – final direction

A midnight canvas, champagne accents and an abstract software-system visual that evolves from exploratory points to mapped connections to a live production network across the three stages. Unmistakably premium, but it needs careful performance and contrast testing before launch.

Visual system	Midnight #111A28, champagne #C4AE7E, pale blue #A8BFCA. Geometric sans + restrained italic display.
Desktop layout	Split hero with the signature software-network artwork. Proof line, work grid and the three stages, each with its evolving visual.
Mobile layout	Single-column hero; visible action before secondary art. Work and stages stack; menu opens inline.
Motion	Optional subtle fades only. No autoplay video or essential animation; respect reduced-motion preference.

The signature visual

One digital system, three states: loose points and exploratory paths in ideation, mapped nodes and data layers in solution design, and a connected, glowing production network in productionizing. It carries the philosophy across the hero, the stage cards and, later, case-study covers and proposals.

Generated illustrative software-system artwork, not a client system or technical specification.

Design concept, not a live replacement

The wording is proposed around your stated positioning. Client outcomes come from your current site and remain unverified. The delivery model (who delivers alongside you, if anyone) is still to be confirmed. Concept navigation opens the relevant wireframe or existing work page. Project-discussion buttons show the contact flow, not a live form.

SOFTWARE / APPLIED AI / DELIVERY

Complex ideas, *measurable* outcomes.

From first idea to production: ideation, solution design and productionizing, delivered against pre-agreed, measurable outcomes.

Discuss your project ↗

Pre-agreed, measurable outcomes · Milton Keynes, UK

EXPERIENCE, WITH CONTEXT

Selected examples from the existing portfolio. Engagement roles and publication permissions to be confirmed before launch.

01 / SELECTED WORK

From possibility to practice.

FINANCIAL SERVICES / APPLIED AI

LSEG: AI programme transformation

Development workflows supported by GenAI.

18-20% productivity improvement*

[Read existing case study ↗](#)

*Existing website claims, not independently verified. Diagrams are illustrative, not client system representations. Role, baseline and attribution need review.

FINANCIAL SERVICES / CLOUD

Schroders: serverless migration

A serverless solution for fraud and financial crime.

20% cloud cost reduction*

[Source: existing portfolio](#)

Idea to operation, in three stages.

01

Ideation

Simplify a complex idea into a clearly defined problem, with success measures agreed up front.

Discovery, framing, feasibility, agreed measures.

Capabilities in applied AI, cloud and software engineering sit inside these stages, not beside them.

02

Solution design

Map the software, data flows, roadmap and evaluation approach to meet those measures.

System design, data flows, evaluation criteria, delivery plan.

03

Productionizing

Build, integrate and hand over a solution that works in production, and can be measured there.

Build, integration, evaluation, support and handover.

03 / THE PROMISE

Outcomes you can hold us to.

Every engagement starts by agreeing what success looks like and how it will be measured. The work then moves through the three stages, and the result is checked against what was agreed.

Proposed practice copy based on your stated positioning. Confirm the delivery model and who delivers before publication.

Agree

Define the outcome and how it will be measured, before work begins.

Deliver

Move through ideation, solution design and productionizing.

Measure

Check the result against what was agreed, then hand over.

04 / INSIGHTS

Thinking worth sharing.

05 / LET'S TALK

What should your next system achieve?

Tell us what you are working on and where you need clarity.

Form layout only. No information is collected or sent from this concept.

[See contact flow specification ↗](#)

KANAK SYSTEMS

Milton Keynes, UK

Legal and privacy details to be supplied

Generated abstract systems artwork, not a client system or technical specification.

Why this improves the journey

1. A buyer sees the promise, the evidence and the next action in that order.
2. The three stages (ideation, solution design, productionizing) become the structure instead of nine equal technology cards.
3. The measurable-outcomes commitment tells a buyer how to hold the company to account.
4. The contact area states what the next step is, without pretending a booking or form exists.

[Compare wireframes](#)

Live public content checked 6 October 2026. Design concept only: artwork is generated and illustrative, client results are site-reported and not independently verified, and no live website changes or enquiries were sent.

Final website concept · dark theme · 6 October 2026

A specialist services company built on pre-agreed, measurable outcomes, shown through three stages: ideation, solution design and productionizing. Your existing logo is retained.

Concept	Logo & type	Wireframes	Site review
---------	-------------	------------	-------------

Your existing identity, retained

Keep the Kanak Systems logo and its font styling. The change here is background treatment, not a new identity: the same globe, letterforms, spacing and single-line lockup, adapted to sit naturally on the midnight canvas.

Original logo from kanaksystems.com. Shown unchanged for comparison.

Background adaptations

01 / RECOMMENDED FOR THE DARK WEBSITE

The image shows the Kanak Systems logo in a light, warm-ivory color. The globe icon and the text "KANAK SYSTEMS" are both rendered in this single color, creating a clean, minimalist look against the dark background.

Warm-ivory knockout

The same logo in one light colour. No black rectangle, no new wordmark, no new monogram. Champagne gold belongs to the site accents; the logo stays quiet and readable.

02 / ORIGINAL COLOURS ON MIDNIGHT

The image shows the Kanak Systems logo in its original colors. The globe icon is a vibrant purple, and the text "KANAK SYSTEMS" is in a light cream or off-white color. The logo is set against a dark, midnight blue background.

Original colours, clear ground

The purple globe and cream lettering stay intact. Only the background is removed. This keeps more of the current colour identity if you prefer it.

made from the original logo master to keep fine strokes sharp at every size.

Used in the website concept

The dark website concept uses the warm-ivory version. Neither option changes the existing type styling.

Website typography, not a logo redesign

Logo	Keep the existing Kanak Systems display lettering and lockup as-is.
Headlines	A restrained editorial serif, shown here with Georgia as a free system stand-in.
Body and navigation	A clean sans-serif, shown here with Helvetica/Arial system stand-ins.
Accent	Champagne gold for one headline emphasis or a primary action, not every element.

The site type complements the existing logo; it does not replace its font. Any premium font choice would need the right web licence. New wordmarks and monograms are no longer part of this proposal.

Live public content checked 6 October 2026. Design concept only: artwork is generated and illustrative, client results are site-reported and not independently verified, and no live website changes or enquiries were sent.

Annotated homepage wireframes

Low-fidelity layouts show content order and behavior before committing to a visual style. The design follows the agreed positioning and evidence. On phones these diagrams stack; the actual designs adapt to the viewing width.

Intelligent systems

01 Header

Compact wordmark / Work / How we work / Contact

Same navigational clarity, darker art direction.

02 Systems-led hero

7 columns: measurable-outcomes promise + CTA | 5 columns: signature artwork

Mobile: CTA precedes image; the motif is decorative, not required to understand.

Primary action

Visual

03 Evidence checkpoint

Sector context + selected documented engagements

Sets credibility before capability claims.

04 Work gallery

Two broad visual cards with role and result

Simple static diagrams; no client-confidential screenshots.

05 Three stages

Ideation → solution design → productionizing

Each stage carries its evolving system: exploratory points → mapped connections → live production network.

06 Delivery framework Measures agreed at ideation, checked at productionizing Include AI evaluation/oversight only when confirmed.
07 Insights Two relevant engineering or AI perspectives Evidence of thinking, not a filler content feed.
08 Project start Short enquiry and clear expected next step No unverified free-call duration or availability claim.

Reusable inner-page templates

Case study 01 Context Sector / client or anonymized name / date / duration Approved attribution, not presumed endorsement. 02 Outcome & role Problem headline / agreed success measure / result / contribution Add baseline and method; separate programme value from fees. Primary action Visual 03 Evidence Challenge → decisions → delivery → measured result Approved diagrams, quotes or measured detail. 04 Next step Related stage / relevant work / project discussion Contextual contact, not a generic footer only.
--

Stage detail 01 Stage & buyer problem Which stage fits, and what it helps you decide or deliver Lead with a situation, not a stack. 02 Engagement scope Who it suits / outputs / how outcomes are agreed and measured No invented fixed price or duration. Primary action Visual 03 Relevant evidence One matching case with its measured result, plus useful technical insight Clear proof instead of icon-only cards. 04 Project discussion Short enquiry carrying the selected stage as context Let the user change context before sending.

Contact flow specification

Responsive & accessibility notes

1. Desktop: 12-column grid, readable text measure, two work cards and the three stages.
2. Mobile: single-column layout at 390px; 44px design targets for controls, no hover-only content and no decorative art delaying the primary action.
3. Menu: labelled toggle, aria-expanded, Escape to close and predictable focus. Contact: programmatic labels and announced status messages.
4. Design intent is WCAG 2.2 AA. Measure real contrast and test keyboard, screen-reader, zoom and reduced-motion behavior in the production build.

Live public content checked 6 October 2026. Design concept only: artwork is generated and illustrative, client results are site-reported and not independently verified, and no live website changes or enquiries were sent.

Final website concept · dark theme · 6 October 2026

A specialist services company built on pre-agreed, measurable outcomes, shown through three stages: ideation, solution design and productionizing. Your existing logo is retained.

Concept	Logo & type	Wireframes	Site review
---------	-------------	------------	-------------

The verdict

Your positioning is stronger than the website makes it feel. You described Kanak as a specialist services company for any organisation needing consulting and delivery expertise, one that simplifies complex ideas into solutions and delivers pre-agreed, measurable outcomes. The current site instead reads like a generic IT services catalogue. This revision makes that promise, and your three stages (ideation, solution design, productionizing), the spine of the design.

The chosen direction

Intelligent systems: midnight indigo and champagne gold, with a software-network visual that evolves through ideation, solution design and productionizing. Your existing logo is retained. The concept is on the Concept page.

Fix these first

- Put the promise first: pre-agreed, measurable outcomes, for any organisation. Replace the technology catalogue with the three stages: ideation, solution design, productionizing.
- Move two selected case studies up the page. Resolve role, permission and measurement before amplifying any client or percentage claim; they are the evidence for the outcomes promise.
- Simplify the contact journey. Add privacy context, an accessible menu and clear form feedback before visual polish.
- Apply one visual system: the retained logo on a clear ground, quiet colour, better spacing, less card chrome and consistent editorial imagery.

Section-by-section review

Observed on the live public site, 6 October 2026. These are design judgments, not analytics findings.

- Navigation & identity**
Now: The black rectangular logo sits on a white header; purple navigation and the CTA compete with it. The mobile menu button has no accessible name in the captured tree.
Change: Keep the existing wordmark and styling on a transparent ground. Keep Work, How we work, About, Insights and one contact action. Label the mobile toggle, announce expanded state and test keyboard focus.
- Hero**
Now: The experience-led headline wraps into five lines on desktop and four on mobile. A long list of technologies follows it. Four floating capability cards fill the right side.

Change: Lead with the positioning: a specialist services company delivering pre-agreed, measurable outcomes for any organisation. Replace the technology list with the three stages: ideation, solution design, productionizing. Replace Start Your Journey / Learn More with Discuss your project / View selected work.

3. **Client trust & metrics**

Now: The homepage repeats £7M+, 50+ projects and 21+ years. The logo sequence appears twice in the page tree, consistent with a looping strip. It says Trusted by Industry Leaders, while the founder section lists career experience.

Change: Use one quiet proof strip tied to the outcomes promise. Distinguish direct Kanak engagements, subcontracted work and prior career experience. Check permission for names/logos. Do not imply every employer was a company client. Hide purely duplicated carousel items from assistive technology.

4. **Services**

Now: Nine equal cards create a catalogue: Cloud Migration and Cloud Adoption overlap; Generative AI and Agentic AI overlap. Testing, delivery, Salesforce and Snowflake receive similar weight to the core offer.

Change: Regroup around how you deliver: ideation, solution design, productionizing. Nest AI, cloud and software engineering capabilities inside the relevant stage. Move specialist tools into the relevant detail page. Only keep services you actively want to sell.

5. **Why choose us**

Now: A long paragraph repeats experience and outcomes, followed by generic Expert Team, Quality Assurance, Timely Delivery and Proven Success cards.

Change: Lead with the measurable-outcomes promise and show the three stages in action. Explain who delivers and how work is handed over. Replace generic quality cards with evidence of the promise being kept.

6. **Founder**

Now: The homepage includes career summary bullets, enterprise history, certifications, education and technologies. It reads more like a CV than a buying journey.

Change: Keep a short introduction to who leads the work, current verified credentials and a genuine portrait. Move the full biography to About. Clarify personal contribution and which experience predates Kanak.

7. **Case-study index**

Now: Six useful examples already exist. Repeated summary stats and sector tags delay the actual work on mobile. The index calls 20% an Average Cost Reduction, while the homepage and Schrodgers example describe a 20% result.

Change: Put selected work on the homepage: it is the evidence for the measurable-outcomes promise. Use one outcome and a clear scope per card. Remove or substantiate the average claim; one project result does not establish a portfolio average.

8. **Case-study detail**

Now: The LSEG page already has dates, a 25-person team, programme value, challenge and supporting narrative. The headline claims 18-20% productivity improvement.

Change: Retain the substance. Add your precise role, baseline, measurement method, attribution and an approved client quote if available. Explain that programme value is not Kanak revenue. Show a readable, non-confidential system diagram instead of generic sector imagery.

9. **Insights**

Now: Seven articles span Copilot, transport agents, MCP, asylum workflows, RAG and technical debt. Technical diagrams are useful inside articles but dense as mobile thumbnails.

Change: Keep the content. Use consistent editorial covers, topic labels and a buyer-friendly takeaway. Separate implementation guides from executive perspectives. Feature two relevant articles on the homepage; no need to manufacture a high publishing cadence.

10. **Contact**

Now: Five required inputs include separate first/last name, company and project details. The page offers a free consultation, a 24-hour business-day response and an urgent-call instruction without a phone in the inspected contact block.

Change: Use Name, Work email and What are you working on? with company optional. State what happens next. Add a privacy link beside submission and honest success/error states. Remove the call instruction or provide a real approved number. A domain email would better match the brand, after setup.

11. **Footer & consistency**

Now: The visible footer has company/service links, email and Milton Keynes, but no privacy link or company-registration details in the captured content. The same AI Partner page title appears on home, work and insights.

Change: Add verified legal identity, relevant registration details and privacy/cookie information as applicable. Give each page a unique descriptive

title. Standardize UK spelling and fix communciation, hands on and similar copy errors.

What the benchmark sites do better

A curated reference set, not a claim that these are objectively the world's best. Kanak should borrow patterns, not brand identities.

Work & Co

One compact promise, an attributed external quotation and a restrained editorial hierarchy.

For Kanak: Borrow the clarity and confident whitespace, not its scale or borrowed clients.

AKQA

The homepage leads with named work and project propositions before its Frontier Agency statement.

For Kanak: Make evidence the attraction. Avoid copying a full-screen reel or theatrical navigation for a small consultancy.

ustwo

Digital products people stick with is an outcome, followed by work, capabilities and client feedback attribution.

For Kanak: Translate technical capability into a human/business benefit. Do not copy its consumer-product tone verbatim.

Clearleft

The Sage story states client, sector, duration, services and a named testimonial, then explains the work.

For Kanak: Use this evidence structure for Kanak case studies; it suits a specialist, relationship-led practice.

Thoughtworks

AI is framed around modernization pathways and enterprise-grade governance, with client work and engineering foundations.

For Kanak: Explain evaluation, security, data boundaries and oversight in AI offers. Publish only practices you can substantiate.

A leaner site map

Home
Work → Index + case-study template
How we work → Ideation / Solution design / Productionizing
Capabilities → AI / Cloud / Software systems, nested under the stages
About → The practice + delivery model
Insights → Index + article template
Contact → Simple project enquiry
Footer → Legal / Privacy / Cookie preferences, if needed

Buyer journey: understand the promise → see the evidence → understand how an engagement runs
→ start a conversation. Existing article and case-study URLs should be retained or redirected when

content moves.

[View annotated wireframes](#)

Before implementation

Audience	Any organisation needing consulting and delivery expertise. Your words, 6 October; case studies can still show sector strength.
Primary action assumption	Discuss a project. Not a confirmed booking promise or a live calendar.
Needs your decision	Which capabilities to lead with (AI, cloud, software engineering), and the delivery model: who delivers alongside you, if anyone.
Needs evidence	Client/logo permissions, engagement history, the measurement basis behind the outcomes promise, current credentials and legal details.

No enquiry was sent and no live site was changed. Project-discussion buttons open the flow specification; work links open your existing public site. A production build would still need CMS/content migration, form delivery, privacy decisions and accessibility/performance testing.

Build and launch checks

1. Validate the promise and the three stage names with a few actual buyers; use existing analytics if available rather than guessing conversion rates.
2. Build responsive templates, optimize images and avoid autoplay video. Test menu, links, contact delivery, spam protection and error states.
3. Check WCAG 2.2 AA: text contrast, keyboard access, visible focus, labelled controls, reduced motion and target sizes. This review is not a conformance audit.
4. Add unique titles/descriptions, structured content and a redirect map. Measure qualified enquiries and case-study-to-contact paths after launch.

W3C accessibility reference
